

Enterprise AI for IS Faculty — hands-on labs (attendee guide)

Everything runs in your browser. No install, no account — just paste the key when asked.

Start here

- **Labs hub:** _____ ← (Tim fills in)
- **OpenAI key:** _____ ← paste this when a lab asks
- **Workshop passphrase (if asked):** _____

Paste the key in the **sidebar** of the Streamlit labs (it stays in your browser only). If a lab is slow to load the first time, it's just waking up — give it ~30 seconds.

The labs (pick a lane; ~5–15 min each)

Lab	You'll...	Lane
Grounding: prompt → retrieval → tool	Ask one question three ways and watch the answer go from a guess to a cited, live, auditable result.	everyone — start here
Build & break a RAG	Tune chunking, then sabotage the pipeline (stale doc, permission leak) and watch quality collapse.	Data
Agent loop with tools	Give a goal; watch the agent plan → call tools → loop. Flip the approval gate on a write.	Builders
Red-team & govern an agent	Try to jailbreak an HR agent; then switch on controls and watch the attacks fail.	Governors
Prompt & structured output (browser-only)	Iterate a prompt; extract clean JSON. No key prompt-box — paste your key on the page.	warm-up / anyone
MCP tool server (advanced)	Run a tool server in a container and connect a client. See the repo's <code>mcp-lab/README.md</code> .	Builders

Tips

- Compare modes in the **Grounding** lab — only the last mode can answer “is order #4471 eligible?”.
- In **Red-team**, run an attack with all controls **off** first, then turn them on one at a time.
- Please don't paste sensitive data — this is a teaching environment on a shared key.
